

SEDGWICK RURAL WATER #2

102 N. Ash

P.O. Box 318

Valley Center, KS 67147

The Environmental Protection Agency (EPA) recently announced changes to drinking water regulations which now require water suppliers to identify all materials used in the construction of water distribution systems nationwide.

The Kansas Department of Health and Environment (KDHE) is requiring public water supply systems to submit this information before October 16, 2024, and we did send this information out to our customers. However, many of our members did not respond to the surveys that accompanied this mailing. Please fill out the survey and return it to the Rural Water District 2 office promptly as we still have not obtained all the information required to fulfill this task.

We have verified there are no lead or galvanized lines in the RWD2 system, up to the meters. Sedgwick Rural #2, as the water supplier, must identify all construction materials used on both our side and the consumer side of the water meter, which means that we need your help!

Thank you for your participation and assistance with this government project.
